FUNCTION: Type XII collagen interacts with type I collagen-
containing fibrils, the COL1 domain could be associated with the
surface of the fibrils, and the COL2 and NC3 domains may be
localized in the perifibrillar matrix.

SUBUNIT: Trimer of identical chains each containing 190 kDa of
nontriple-helical sequences.

TISSUE SPECIFICITY: Lung, brain, sternum, kidney and heart.
DEVELOPMENTAL STAGE: The short isoform was detected in 7 we mice but not in developing mice (19.5 dpc embryos or in 2, 21 days old animals).
SIMILARITY: Contains 4 EGF-like domains.
SIMILARITY: Contains 2 VWFA domains.

TISSUE SPECIFICITY: Found in collagen I-containing tissues isoform Short and isoform Long appear in amnion, chorion, muscle, small intestine, and in cell culture of dermal fibroblasts, keratinocytes and endothelial cells. Only the isoform is found in lung, placenta, kidney and a squamous carcinoma cell inco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Name=Short;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Event-Alternative splicing, Named isoforms=2:
Comment=The final tissue form of collagen XII
homotrimers of either isoform Long or isoform
combination of isoform Long and isoform Short;

WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human WARP protein

                                                                                    The invention relates to a novel isolated polypeptide (NOVX). A polypeptide of the invention has cytostatic, immunomodulator, neuroprotective, nootropic, anorectic, antidiabetic, antimicrobial, and antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious disease, metabolic syndrome X or dyslipidaemias. The nucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Alsobrook JP, Alvarez E, Anderson DW, Boldog FL, Casman SJ; Catterton E, Chapoval A, Crabbree-Bokor JR, Edinger SR, Ellerman Ettenberg S, Gangolli EA, Gerlach VL, Gorman L, Gunther E, Guo X Gusev VY, Herrmann JL, Ji W, Kekuda R, Li L, Liu X, Macdougall Mclachlan T, Malyankar UM, Mezick AJ, Millet I, Mishra VS; Paddigaru M, Patturajan M, Pezkick AJ, Millet I, Rastelli Rieger DK, Rothenberg ME, Sciore P, Shenoy SG, Shimkets RA; Smithbon G, Spytek KA, Stone DJ, Vernet CAM, Voss EZ, Zhong M;
                                                                                                                                                                                                                                                                                                                                                                    New NOVX polypeptides and nucleic acid molecules useful for preventing treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics.
                                represents a NOVX polypeptid
                                  further used as hybridisation probes, in chromosome typing, preventive medicine, and pharmacogenomics. 'represents a NOVX polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    996
```

Mouse Willebrand Factor A (first entry) domain related-protein (WARP).

Willebrand Factor A domain related-protein; von Willebrand Factor A; VA; extracellular matrix; ECM; molecular marker; cartilage; arthritis; WARP; gene therapy; mouse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Willebrand Factor A domain related-protein (MARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is mouse WARP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local S:

KIM proteins can be administered therapeutically by expressing CC KIM encoding polynucleotides, to promote growth and/or survival of CC damaged tissue (e.g. renal tissue), since the KIM proteins are CC upregulated in injured or regenerating (especially renal) tissues. KIM CC damaged tissue (e.g. renal tissue), since the KIM proteins are upregulated in injured or regenerating (especially renal) tissues. KIM CC damaged tissue (e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/ CC prophylaxis of conditions associated with disfunction/disregulation of CC KIM genes or proteins, especially renal diseases or impairments of renal function in humans (e.g. acute renal failure, acute nephritis). The CC polynucleotides can be used to produce antisense sequences which, when internalised into cells, can disrupt expression of a cellular KIM gene, CC calso useful in therapy (e.g. to block the growth of tumours dependent on CC KIM for growth) or compositions. The proteins and polynucleotides are compositions. The proteins and polynucleotides are cC (indicative of increased risk, or presence of, renal injury or impaired CC (indicative of increased risk, or presence of, an autoimmune response or abnormal tissue growth arising from/affecting renal tissue). The proteins can also be cc used to locate KIM-producing cells (especially specific loci, e.g. tissue masses abnormally producing/expressing KIM such as tumours arising tissue indications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kidney injury-associated molecule, KIM, injured or regenerating tissues, useful regeneration, especially to treat renal

                                                                                                                                                                                                                                                                                                                                                                                                               CC This invention relates to nucleic acid sequences AAF93744 - AAF93916
CC which encode human secretory or membrane proteins represented by AAB8817
CC - AAB88419. Included in the invention are primers AAF93917
CC - AAF62232 - AAF62235 which are used to isolate the cDNA sequences of the CC invention. The invention also includes methods for the production of the cantibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polymucleotide sequences can be used in gene CC therapy. The polymucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated CC with inappropriate secretory protein/membrane protein expression. The CC nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. CC proteins/membrane polypeptides and their role in metabolism. The CC polypeptides may be used as antigens in the production of secretory proteins/membrane polypeptides and their role in metabolism. The CC antagonists had in assays to identify modulators (agonists and CC antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be the presence of the polypeptides in samples (e.g. by enzyme CC treated inmunosorbant assay (EJISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                          Sequence 285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding secretory proteins/membrane proteins, useful gene therapy or as candidate target molecules in drug development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated polynucleotide membrane proteins, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            foetal abnormality; developmental abnormality; haematopoietic disorder; inmune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.
AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ni J, Baker KP,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, sapiogenic disorders, kidney disorders, cc disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used Ca sa a food additive or preservative to modify storage properties. CC Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked induced in diagnostic immunoassays (ELISA). The present sequence represents a human CC captered protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 215

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  맑
                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The protein X are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutsfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Albumin fusion protein; therapeutic protein X; human albumin; HA; human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; cytostatic; antiinfertility; antiinflammatory; antivolcer;

New albumin fusion proteins, useful for diagnosing, treating, or ameliorating diseases or disorders e.g. cancer, anemia, ariasthma, inflammatory bowel disease or Alzheimer's disease. , treating, preventing anemia, arthritis,

Disclosure; SEQ ID NO 2096; 279pp; English

Cdisorder in a patient computa; a method of treating a cisease or cdisorder in a patient computating the step of administering the albumin CC fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; CC a method of extending the shelf life of Therapeutic protein: X, or its fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the comprising the encleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The activities: cytostatic, antianemic, antiarchritic, antiasthmatic, antiacterial, osteopathic, dermatological, antigout, immunomodulator, antiarrhythmic, cardiant, nootropic, antilipaemic, nephrotropic, uropathic, neuroprotective, antiparkinsonian, tranquilizer, antidiabetic, anabolic, hypertensive, and vulnerary. The albumin fusion protein nucleic acid may be used in gene therapy to treat disorders. The albumin fusion protein is cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), cancer (e.g. neamnia, multiple myeloma, arthritis, asthma, ALDS, autoimmune disease, inflammatory bowel disease, psoriasis or Lyme (e.g. disease), reproductive system disorders (e.g. prostatitis, inguinal carcinoma, variacocela, penile carcinoma, ovarian adenocarcinoma or Sertoli-levidiseases), musculoskeletal diseases (e.g. rhabdomyomas, heart disease, acute carchexia), cardiovascular diseases (e.g. rhabdomyomas, heart disease, acute carchythmia, cardiovascular diseases (e.g. rhabdomyomas, heart disease, or Tay or syndrome, batal syndrome. Turner's syndrome, bart syndrome, or Tay CC Down's syndrome, Patau Syndrome, Turner's syndrome, Apert syndrome or Tay (CC -Sachs disease), excretory diseases (e.g. urinary incontinence, urinary (cc tract infections or renal disorders), neural or sensory disease (e.g. CC Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, (cc cerebellar ataxia, attention deficit disorder, autism or obsessive (cc computsive disorder), respiratory disease (e.g. emphysema, lung cancer or (cc contextional lung disease), endocrine disease (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal (competitive tissue or epithelial disease) (e.g. Crohn's disease, and or connective tissue or epithelial disease (e.g. Crohn's disease, corporate a therapeutic protein x relating to the albumin fusion protein (corporation). This sequence corporation in the invention. The sequence listing data for this specification was completed from the USPTO website. further relates to: a composition comprising the albumin fusion pand a pharmaceutical carrier; a kit comprising the composition of albumin fusion protein formula; a method of treating a disease or relates to a novel albumin fusion protein. of the

CC AIDS, autoimmane diseases (e.g., rheumatoid arthritis), inflammation, callergies, neurological disorders (e.g., Alzheimer's disease, reurological disorders (e.g., Alzheimer's disease, atheroscierosis, cardiovascular disorders, sepsis, diabetes, atherosclerosis, cardiovascular disorders, sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine consistent and infections. The proteins can also be used to aid wound the self-gradient organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human can be carried to in the disorders mention as an entire the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used in the corrected protein fragment referred to in the disclosure of the invention can be used to an entire the corrected protein fragment referred to in the disclosure of the invention can be used to an entire the corrected protein fragment 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the new protein the presence of mutations in the new genes. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ni J,
